Here are **Beginner- level only** questions (40 total: Lists, Tuples, Sets, Dictionaries) **each with a short helpful tip**.

No intermediate or advanced topics included.

Part A — Python Lists (10 Beginner Questions)

1. **Create a list** nums = [3, 1, 4, 1, 5] **and print the first and last elements.**
   Tip: Use nums[0] and nums[-1].
2. **Find the length of the list** colors = ['red', 'blue', 'green']**.**
   Tip: Use len(colors).
3. **Append** 'yellow' **to the list** colors = ['red', 'blue']**.**
   Tip: Use append().
4. **Insert** 'orange' **at index 1 in** fruits = ['apple', 'banana']**.**
   Tip: Use insert(index, value).
5. **Remove** 'banana' **from** fruits = ['apple', 'banana', 'grapes']**.**
   Tip: Use remove(value).
6. **Pop the last element from** items = [10, 20, 30] **and print the popped value.**
   Tip: Call items.pop().
7. **Check if** 3 **is in the list** nums = [1, 2, 3, 4]**.**
   Tip: Use the in operator.
8. **Print the slice** [2, 3] **from the list** [0, 1, 2, 3, 4]**.**
   Tip: Use slicing: a[2:4].
9. **Replace the element at index 1 in** a = [5, 10, 15] **with** 12**.**
   Tip: Use assignment: a[1] = 12.
10. **Count how many times** 2 **appears in** [1, 2, 2, 3, 2]**.**
    Tip: Use list.count(value).

Part B — Python Tuples (10 Beginner Questions)

1. **Create a tuple** t = (10, 20, 30) **and print the second element.**
   Tip: Tuples use indexing: t[1].
2. **Find the length of tuple** ('a', 'b', 'c')**.**
   Tip: Use len().
3. **Unpack the tuple** (4, 5) **into variables** x **and** y**.**
   Tip: x, y = (4, 5).
4. **Check if** 'b' **is in the tuple** ('a', 'b', 'c')**.**
   Tip: Use 'b' in tuple.
5. **Create an empty tuple and print its type.**
   Tip: Empty tuple is ().

6. **Concatenate** (1, 2) **and** (3, 4) **into a new tuple.**
   Tip: Use + operator.
7. **Repeat** (7,) **three times.**
   Tip: Use tuple * number.
8. **Find the index of** 2 **in** (1, 2, 3, 2)**.**
   Tip: Use index() method.
9. **Count how many times** 2 **appears in** (1, 2, 3, 2)**.**
   Tip: Use count() method.
10. **Create a single- element tuple containing the value** 5**.**
    Tip: Remember to use a comma: (5,).

Part C — Python Sets (10 Beginner Questions)

1. **Create a set from** [1, 2, 2, 3] **and print it.**
   Tip: Use set(list).
2. **Add element** 4 **to the set** {1, 2, 3}**.**
   Tip: Use add().
3. **Remove element** 2 **from the set** {1, 2, 3}**.**
   Tip: Use remove().
4. **Check if** 5 **is in the set** {1, 3, 5}**.**
   Tip: Use in operator.
5. **Find the length of set** {10, 20, 30}**.**
   Tip: Use len().
6. **Clear all elements from the set** {1, 2, 3}**.**
   Tip: Use clear().
7. **Create a set** {'a', 'b'} **and add** 'c' **only if it's missing.**
   Tip: Check membership first: if 'c' not in s:.
8. **Convert list** ['a', 'a', 'b'] **into a set to remove duplicates.**
   Tip: Casting removes duplicates automatically.
9. **Create two sets and print their union.**
   Tip: Use set1 | set2.
10. **Create two sets and print their intersection.**
    Tip: Use set1 & set2.

Part D — Python Dictionaries (10 Beginner Questions)

1. **Create a dictionary** {'name': 'Ali', 'age': 25} **and print the name.**
   Tip: Use d['name'].
2. **Add key** 'city': 'Lahore' **to a dictionary.**
   Tip: Use assignment: d['city'] = 'Lahore'.
3. **Change** 'age' **in** {'name': 'Ali', 'age': 25} **to** 30**.**
   Tip: Assign a new value: d['age'] = 30.
4. **Delete key** 'age' **from a dictionary.**
   Tip: Use del d['age'].
5. **Check if key** 'salary' **exists in a dictionary.**
   Tip: Use in operator.
6. **Print all keys from** {'a': 1, 'b': 2}**.**
   Tip: Use d.keys().
7. **Print all values from a dictionary.**
   Tip: Use d.values().
8. **Iterate and print key- value pairs from** {'x': 10, 'y': 20}**.**
   Tip: Use for k, v in d.items().
9. **Use** get() **to safely read key** 'score' **from an empty dictionary.**
   Tip: Use d.get('score', default_value).
10. **Create a dictionary from two lists: keys = ['a','b'], values = [1,2].**
    Tip: Use dict(zip(keys, values)).
